Objective: Michelin China 2027 Campus Recruitment - Business Management Trainee (Shanghai)

Profile

BSc in Chemical Engineering & Technology (National First-Class Programme) with a technology x business profile: translating customer process pain points into deliverable equipment and process solutions for ExxonMobil, CATL, LyondellBasell and Daikin at Leistritz, and co-developing an automotive underbody coating with Henkel China; backed by provincial first-prize industry-chain and business-analysis practice.

Education

Northeast Petroleum University | Chemical Engineering & Technology (National First-Class Programme) | BSc, Full-time Sep 2022 - Jun 2026

Core courses: Chemical Engineering Principles | Chemical Process Design | Polymer Materials | Transport Phenomena | Aspen Plus Simulation | Chemical Reaction Engineering | EHS

Work & Internship Experience

Leistritz Machinery (Taicang) Co., Ltd. | Process Engineer (Technical Application & Key-Account Support) Jul 2026 - Present

- Serve leading materials and new-energy accounts (ExxonMobil, CATL, LyondellBasell, Daikin, Kingfa), converting customer process pain points into executable equipment and process solutions that directly support customers' new-product launch.
- Lead the on-site commissioning and processing-validation loop (lab concept to customer material trial to on-site start-up) on co-rotating twin-screw extrusion (ZSE27CC); optimised screw configuration and operating parameters to move key quality indicators from rejected to released.
- Cover PP/PE, flame-retardant compounds, masterbatch, carbon electrode and fluorine-free materials (30-100 kg per batch), building cross-functional material - process - cost - delivery coordination experience.

Synthomer Shanghai Co., Ltd. | Coatings R&D & Technical Application Intern Jul 2025 - Oct 2025

- Co-developed a new waterborne anti-chip automotive underbody coating with Henkel China, defining formulation and validation plans against OEM commercial requirements on adhesion and impact resistance.
- Led high-precision slurry preparation and dispersion optimisation, cutting product viscosity by about 10% and lifting impact resistance by about 15%, widening the application window and linking lab formulation to customer purchasing decisions.

PetroChina Daqing Petrochemical Company - No.2 Refinery | Field Process Intern Jun 2025 - Jul 2025

- Supported 200+ field inspections and processed 50+ sets of operating data, assisting engineers in troubleshooting 10+ equipment abnormalities; proposed 3 safety improvements, all adopted.

PetroChina Daqing Oilfield Chemical Light-Hydrocarbon Fractionation Branch | Field Process Intern Jul 2024 - Sep 2024

- Tracked ethylene/propylene/butene fractionation, processed 50+ sets of data and supported the optimisation of 3 key operating parameters; independently wrote the internship report and 2 adopted safety proposals.

Key Projects

Frontier Industry Research & Business Analysis Practice | Core Member 2021 - Present

- Track new-energy, semiconductor, AI-infrastructure and energy-chemical value chains; built a policy - technology - supply & demand - fundamentals framework to judge industry trends and competitive landscape.
- Won provincial first prize (top 5%) in the East Money National College Financial Challenge and provincial second prize in the National Financial Innovation Practice Competition; simulated portfolio returns above 20%.

Dimethyl Sulfoxide (DMSO) Clean-Production Plant Process Design | Project Lead Feb 2025 - Jul 2025

- Completed full-process Aspen Plus simulation with PFD/P&ID drafting; parameter optimisation raised raw-material utilisation by 18% and cut by-products by about 23%, building a technical-option-to-cost-and-capacity business view.

Modified Biomass-Derived Carbon Electrode for Supercapacitors | Core Member Sep 2025 - Jun 2026

- Prepared and characterised electrode materials (SEM/XRD/BET, specific surface area 2143.6 m²/g) with 5,000 charge-discharge cycles at 92% capacitance retention, providing performance evidence for new-energy material applications.

Skills

- **Business & Customer:** B2B key-account technical support | Customer pain-point discovery & solution conversion | Commercial-technical communication | Value-chain & supply-demand analysis | Market research
- **Technology & Product:** Twin-screw extrusion & polymer processing | Process parameter optimisation | Application validation & trial loop | Experimental design & data analysis
- **Tools & Languages:** Excel | PowerPoint | Aspen Plus | AutoCAD | CET-6 | TOEFL (CEFR B2)

Awards & Certificates

East Money National College Financial Challenge - Provincial First Prize (Top 5%) | National College English Competition - Second Prize | National Computer Rank Examination Level 2 | CAD Level 2
